

Aggregation server

hosted at one of the four sites
holds global weights only — never sees raw CGM data

④ FedAvg aggregation → next-round global weights

↻ repeat ≤ 25 rounds

early stopping on
avg validation MSE

① global weights

③ updated weights

*public internet
plain HTTP*

Client 1

HUPA-UCM

22 patients

876 patient-days

② local training
(1 epoch per round)

Client 2

ABC4D

25 patients

3,093 patient-days

② local training
(1 epoch per round)

Client 3

ARISES

12 patients

533 patient-days

② local training
(1 epoch per round)

Client 4

T1D-UOM

14 patients

876 patient-days

② local training
(1 epoch per round)

Four UK institutions — UCL, Manchester, Newcastle, Oxford — one client each.

Raw CGM data never leaves its institution; FedProx and MLDG change only step ②.
